

Science— Exploring different materials

Concept: **Chemistry** – The concept that very small particles, combining mixing and moving in different ways can be used to explain what we see

Key vocabulary

- **material** – what an object is made from

- **soft** – a material that feels gentle to touch

- **hard** – a material that does not easily change shape

- **shiny** – a smooth surface that can reflect light

- **dull** – not clear, bright or shiny

Exploring different types of rock.
